RESULT 1
AAU98047
```

```
The invention relates to an isolated polypeptide (I) comprising amino acid sequence that is at least 95% identical to a polypeptide fragment of a fully defined human 9 protein-coupled receptor BMY2 (HSDRBMY2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide, or variant, alleft coupping the above bolypeptides.

Also included are polynuclectides encoding the above polypeptides, whereasten vertees, however, and its polynucleotides and modulators of HGPRBMY. And its polynucleotide are useful for diagnosis prevention, treating or ameliorating a medical condition e.g. a disease, disorder, or a condition related to brain, breast, gastrointestinal or energial systems, such that thalamus, corpus callosum, cerebellum, caudate nucleus, amygdala, substantia nigra, hippocampus, brain, breast, colon, spinal chord-related disorders, hippocampus, brain, breast, colon, spinal chord-related to spinal chord and brain. An antagonist or inhibitor of (1) identified using (1) is useful for treating a neoplastic disorder such as leukaemia, myeloma, immunological disorders such as eleukaemia, myeloma, immunological disorders such as leukaemia, myeloma, immunological disorders such as eleukaemia, myeloma, immunological disorders such as leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      days) human a protein coupled reserver PMT2 (Happamy2) polypeptide, useful for modulators of HGPRBMY2 activity that are useful for treating leukaemia, cholecystitis, Grave's disease, epilepsy, dementia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide are useful for modulating intracellular calcium levels, modulating Cafot sensitive signalling pathways and modulating nuclear fartor activator of transcription (NRFT) element associated signalling pathways. The present sequence is a representative sequence for a set of sequential Noterminal deletion mutants of HGPRRMY7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       191 VAREBEWSMERKLYRLLARGIDLEFASFYFWRAYDGGYWFGGYTGHLRNGIRSYGWTWWLL 240

(HOPRBMY?)
Polypeptide, or variant, allein variant or species homologue.
Also included are polymolectides encoding the above polypeptides, appression vertors, host cells, anti-HGPPBMY7 antibodies and modulators of HGPRBMY7. HGPRBMY7 and its polymolectide are useful for diagnosis prevention, treating or ameliorating a medical condition e.g. a disease, disorder, or a condition related to brain, breast, gastrointestinal or musculo-skeletal systems, such that thalamus., corpus callosum., caudate nucleus-, amygdala-, substantia nigra-, hippocampus-, krain-, heast-, colon-, spinal chord-related disorders, breast cancer, neoplastic diseases, and disorders related disorders, broad and brain An antagonist or inhibitor of (1) identified using (1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is useful for treating a neoplastic disorder such as leukaemia, myeloma, immunological disorders such as cholecystitis, Grave's disease, osteoarthritis, asthma, neurological disorders such as dementia, depression, Albeimer's disease, Down's syndrome and epilepsy. HGPRBMY7, its polynucleotide and agonists or antagonists of the polypeptide are useful for modulating intracellular ralcum ievels, modulating Ca<sup>2</sup>, sensitive signalling pathways and modulating nuclear factor activator of transcription (NRAT) element associated signalling pathways. The present sequence is the HGPRBMY7 protein sequence.
                                                                                                                                                                                                                                                    Novel human G protein coupled receptor EMY7 (HGPREMY7) polypoptide, useful for modulators of HGPREMY7 activity that are useful for treating leukacmia, cholecystitis, Grave's disease, epilepsy, dementia, depression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 KVCFMYASSPAKQVSIHNYTIMSVLVAIWTVASELPEPEPEPESTIRHHEGVEMCEVDVPA 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181 VAEERSMESSILTELLARGLELERASETEWRAYTOCKFFFOUTOU FULLE FYLTUTAGEL 240

compound modulating activity preferably neuropeptide binding or signalling of [11] and for purifying a 9 protein from a sample containing the G protein. The polynucleotide [1] is useful for identifying a compound which binds to [1] encoding [11] and for identifying an animal homologue of [11] The method comprises DNA hybridisation or computer homology searches to identify analyse and sequences of the animal that are homologous to [1]. The compounds identified by the screening methods
                                                                                                                                              d protein coupled receptor, 5PCP-2017, human; antiinflammatory; lamminosippressive, cerebropictative, tranquiliser, anticonvulsant montropic; neuroproteinive, human imminodeliciency virus; HIV, diaberes, cristati, montal disorder, thyroid disorder, across, cell differentiation; homeostasis; movement disorder, disorder, stroke; Huntington's dasease.

Tourette's Syndrome, dyskineda, attention disorder, movement disorder, parkinson's disease; Alzheimer's disease; ataxia; supranuclar palsy; metabolic disorder, cardiovascular disorder, annovement disorder, annovement disorder, perkinson's profilerative disease; periasis; hyperprofilerative disorder, hermonal disorder, perkinson's governant syndrome; alopecia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes the novel isolated G-protein coupled receptor protein-2017. The polypectide (II) is useful as a vaccine in a manual against (II); for identifying a compound binding to (II) proforably compounds useful for treating mental disorders; for identifying a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polymurlentide encoding novel G protein-coupled receptor-2037 and polypeptide useful for identifying modulators useful for treating disorders such as autoimmune disorders, stroke, diabetes, cancer,

galanin receptor-like G-protein coupled receptor for therapeutic purposes, useful for treating disease by gene therapy. A pharmaceutical composition described in the specification is useful for modulating the activity of the Galanin receptor-like GPCR in a pathophysiological disorder, selected from obesity, diabetes, cardiovascular disease, asthma, pain, depression, ischaemia, Alzheimer's disease, sleep disorder migraine, anxiety and reproductive disorder. Specifically, the composition is useful for modulating the activity of the receptor in cognition, analgesia, sensory processing, processing or visceral information, motor coordination, modulation of dopaminergic activity and

Novel isolated human G-protein coupled receptor useful for diagnosing, preventing and treating cell proliferative, neurological, cardiovascular, gastrointestinal, autoimmune/inflammatory and metabolic

Claim 1; Page 119-120; 138pp; English.

The present sequence is human G-protein ccupled receptor-11 (3CREC-11 protein. The present invention relates to GCREC protein and nucleic acids encoding them. 3CREC protein, its against or animatonic are useful of the conditions associated with dereseed expression or overexpression of functional GCREC in a patient, where the disorder is selected from cell proliferative disorders such as actinic bearings. Carteriosclerosis, atherosclerosis, cirrhosis, hepatitis, psoriasis, and cancer, neurological disorders such as epilepsy, stroke, Alzhenmer's disoase, Huntington's disease, Parkinson's disease, cardiovascular disorders such as dyspettain, and and action and adjoint and as diabetes. Chair circuit, viral, bacterial, lungal, parasitic, protections, trauma and metabolic disorders such as diabetes, obserty, osteoporogis. GFREC proteins and their cDNAs are used to assess the effects of exogenous compounds on the expression of GCREC sequences. GCREC cDNA is useful to create knock in humanised animals (pigs) or therapeutic or diagnostic purposes, for somatic or germline genetherapy, to generate hybridisation probes useful in mapping the naturally occurring genemic sequence, and in molecular biological transgenic animals (mice or rats) to model human disease, for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            KIEKWEIPII PDVFQFWHFPDTVPSVQDVDVIPWHHHHHHHHHHHHHHHHHHHH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human G-protein coupled receptor, hRUP9.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              99US-0166088.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                44115-0166099.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9905-6171901
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-0CT-2001                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence represents a human G-protein coupled receptor (GPCR), hRUP9. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to elucidate and understand the roles these receptors play in the human condition, both normal and diseased.
                                                                                                                                                                                                                                                                                                                                                                                                        Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  241 SIAIISALLWLPEWVAWLWVWHLKAAGPAPPQGFIALSQVLMFSISSANPLIFLVMSEEF 300

Antibodies against PPI-001 and compounds which modulate its activity are useful as pharmaceuticals, for manufacturing a medicament for treating a patient having a need to modulate (i.e. (selectively) antagonise or agonise) PFI-001, and for evaluating and/or screening agents that can modulate PFI-001. The nucletc acid is also useful in gene therapy. The nuclet caid and encoded protein are useful for screening drug candidates for treating diseases associated with signal transduction such as obesity, diabetes and metabolic disease, neurodocical disease, psychotherapeutics, urogenital disease,

The invention relates to the human giptotein compact theory: AX be standards. Like all Giptotein-compled receptors, AX be standards. Common and variants. Like all Giptotein-compled receptors, AX be standards. Discated and variants and structural similarity with Giptotein complete the AX be be compacted and structural similarity with Giptotein complete the formal cases of the man and marginal receptor. The human AX be contained to a theory and structural similarity with Giptotein complete the cases of Still 12. The invention like relative to the cases of Still 12. The invention like relative to the case of Still 12. The invention like relative to the case of the many better including bacterial, fungal protected and AX order to the case of th

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ę.

(first entry) 05-JUN-2002 Novel G-protein coupled receptor 2037 (nGPCR-2037) version #1.

G-protein coupled receptor, GPCR-2037, human; antinflammatory; immunosuppressive, cerebroprotective, tranquiliser, anticonvulsant; nootropic, neuroprotective, human immunodeficiency virus; HIV; diabetes, cytostatic, mental disorder, thyroid disorder; renal failure; Crohn's disease; cell differentiation; homeostasis; movement disorder, ox disorder, stroke; Huntington's disease; Tourette's Syndrome; dyskinesis, attention disorder; movement disorder; degenerative disorder; Parkinson's disease; Alzheimer's disease; ataxia; aupranuclear palsy; metabolic disorder; cardiovascular disorder; anorexia; proliferative disease; psoriasis; hyperproliferative disorder; hormonal disorder; polycystic ovarian syndrome; alopecia.

Homo sapiens.

Polynucleotide encoding novel G protein-coupled receptor-2037 and polypeptide useful for identifying modulators useful for treating disorders such as autoimmune disorders, stroke, diabetes, cancer, alopecia, anorexia

Claim 31; Page 61; 101pp; English.

protein-2037. The polypeptide (II) is useful: as a vaccine in a mammal against (II); for identifying a compound binding to (II) preferably compounds useful for treating mental disorders; for identifying a compound modulating activity preferably neuropeptide binding or signalling of (II) and for purifying a G protein from a sample containing the G protein. The polynucleotide (I) is useful for identifying a compound which binds to (I) encoding (II) and for identifying an animal homologue of (II). The method comprises DNA hybridisation or computer homology searches to identify mucleic acid sequences of the animal that are homologous to (I). The compounds identified by the screening methods are useful for treating disorders which include thyroid disorders, renal The invention describes the novel isolated G-protein coupled receptor

Novel G protein-coupled receptor polypeptides including galanin receptor polypeptides useful for identifying modulators that are useful for treating Alzheimer's disease, psoriasis, melanoma, multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disease. Preferably, compounds that decrease or increase the expression of galanin receptor (GAL4) can be used to treat obesity, diabets, hyperlipidaemia and stroke. The GPCR nucleic acid is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is a novel GPCR of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 MNVSFAHLHFAGGYLFSFSQDWRTIIPALLVAVCLVGFVGNLCVIGILLHNAWKGKFSMI 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G nucleic acid molecule that is at least 80% identical to the G professor coupled (GPCR) polynucleotides included in the specification. Also included are probes based on the GPCP sequences (including antisense probes), a host cell comprising an expression vector comprising the GPCP sequence, antibodies raised against the polypeptides, and methods of identifying modulators of the polypeptides. The polypeptides are useful for identifying modulator compounds which function as modulators, activators, repressors, agonists or antagonists of the novel GPCP polypeptides including the GAL4 polypeptide. The antibodies and nucleic acid probes as described above can be used to deserve the presence of the polypeptides and nucleic acid probes as described above can be used to deserve the presence of the polypeptides in which GPCPs are involved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cognition and memory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        depression, politics, marular degeneration, lymphoma, melanoma, multiple sclerosis, osteoarthritis, osteoporosis, Parkinson's disease, psoriasis, rheumatoid arthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also useful for diagnosing cognition and memory disorders, anorexia, hormonal release disorders, cardiovascular activity disorders, pain perception disorders, obesity, diabetes, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           e.g., Alzheimer's disease, amyotrophic lateral sclerosis, asthma, atherosclerosis, basal cell carcinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, crohn's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    121 KUCEMYASIPAAKOVSTHNYTIWSVLVAIWTVASLLPLPEDPEWFFSTIRHHEGVEMCLVDVPA 180
